APPENDIX A: LIST OF POLITICAL PARTIES	31

Global Party Survey, 2019

I: TECHNICAL NOTE:

AIMS

The Global Party Survey, 2019 (GPS) is an international expert survey directed by Pippa Norris (Harvard University). Drawing on 1,861 party and election experts, the Global Party Survey, 2019 estimates key ideological values, issue positions, and populist rhetoric for 1,043 parties in 163 countries.

The research project is designed to replicate the tried and tested methods of expert surveys, while simultaneously innovating and broadening the research agenda in several important ways.

- By expanding the geographic scope of coverage, including parties and countries in all inhabited continents, it allows users to move beyond the traditional focus on Europe.
- By incorporating continuous scaled measures of populist rhetoric, as well as ideological values, analysts can compare the degree to which all parties commonly adopt this discourse, not simply confining analysis to those designated a priori in binary categories as ‘populist’ parties.
- By including party codes used in many other related cross-national studies, the dataset facilitates easy merger for multilevel analysis, such as by comparing party positions with their institutional characteristics or with the attitudes of their voters.
- At the same time, however, sufficient continuity is preserved with prior research measuring party positions to facilitate comparison with these established datasets. Several robustness and validity tests increase confidence in the external validity of the new study.

METHODS

Expert surveys have been widely adopted within the global scientific and policy communities and used for constructing multiple international and domestic indicators, ratings and rankings, exemplified by the World Bank Institute [Good Governance indices](#), the [Varieties of Democracy](#) project, Transparency International’s [Corruption Perception Index](#), and the [Electoral Integrity Project](#) (Cooley and Snyder 2015).

This study builds in particular upon previous expert surveys designed to identify party ideological and issue positions. This includes research projects by Castles and Mair (1984), Huber and Inglehart in 42 societies (1995), Ray (1999), and the series of [Chapel Hill Expert Survey \(CHES\)](#) conducted every four years since 1999 (Hooghe et al 2010; Bakker et al. 2012, 2015). For more details and technical documents, see www.GlobalPartySurvey.org

QUESTIONNAIRE DESIGN

The questionnaire for the Global Party Survey was administered through the Qualtrics platform. It includes 21 core items measured using ten-point continuous scales (illustrated in Figure 2 below). These were designed to identify each party’s current ideological values, their position on several issues such as immigration, nationalism and environmental protection, and their use of populist rhetoric. A copy can be downloaded from the project [website](#).

As well as the core items, the GPS survey also asked questions about the expert’s nationality and citizenship, gender, age, party preferences, and their self-reported L-R ideology, as well as their familiarity with each of the parties, and the degree of difficulty they experienced in completing the survey. Many more items were considered but eventually dropped as the final design sought to establish a judicious trade-off which balanced the length of the questionnaire with the likely fall in the response rate from using a longer survey. The questionnaire was professionally translated and made available

through an optional drop-down menu in six major world languages (English, French, German, Spanish, Russian, Mandarin).

Figure 1: Illustrating the question design format

Parties can be classified by their current stance on ECONOMIC ISSUES such as privatization, taxes, regulation, government spending, and the welfare state.

Those on the economic LEFT want government to play an active role in the economy. Those on the economic RIGHT favor a reduced role for government.

Where would you place each party on the following scale?

	0: Extreme Economic Left	1	2	3	4	× 5	× 6	7	8	9	10: Extreme Economic Right	Don't Know/Not applicable
» \${e://Field/P1Name}	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

PARTY COVERAGE

The survey sought to gather information about the position of parliamentary political parties represented in the lower (or single) House of Parliament/Congress in each country under comparison, thereby excluding parties which only contested presidential, supranational, and regional/local elections.

It is challenging to identify a comprehensive, reliable and up-to-date list of political parties worldwide, however, as there is no single published resource. In addition, lists can quickly become out-of-date as the names (and acronyms) of loosely institutionalized ‘flash’ parties and unstable party coalitions can shift rapidly over time. Leadership parties, formed as loose campaigning factions around the time of an election, but with minimal organizational structure or mass membership, are common in many developing countries. Determining a reliable list of the largest ‘party blocs’ is challenging in states with formal legal bans on party organizations and many independent candidates, such as Kuwait.

The project compiled a list of parliamentary parties (and their share of seat and vote) for each country running for election to the lower house of the legislature using the [IFES Election Guide](#). The list of full party names (in English) for up to ten of the largest parties (with the highest number of legislators) was automatically merged as a field into the Qualtrics questionnaire and tailored for each country. Normally the party list reflected the legislative election closest to the starting date of the survey (Nov 2019), but in some cases the list in our records was compiled from an earlier election (specified in the dataset).

In one or two cases, like Italy, the names of the main party coalitions on the Center-Left and Center-Right were used. In future surveys this practice will be discontinued by including the names of the individual parties, not least because of the volatility of coalitions over successive contests. In total, the survey covers 1,043 parties worldwide (listed in Appendix A).

To facilitate merging and multilevel analysis, the dataset includes party metadata, such as each party’s share of votes and seats in recent national elections. Standard party identification codes allow users to match the GPS data easily with several other party-level datasets, such as [Party Facts](#) (Doring and Regel 2019), [CHES](#), the [Political Party Database](#) (Scarrow, Webb and Pogunte 2017), and [ParlGov](#). Similarly integrated codes in the dataset also allow users to link GPS estimates of party values with party voters in cross-national surveys of the mass electorate, including the [European Social Survey](#) and [World Values Survey](#).

COUNTRY COVERAGE

The project sought to cover independent nation-states worldwide, excluding micro-states (with populations less than 100,000, and those without de jure popular elections for the lower house of the

national parliament and/or severe party bans. Several other cases were dropped from the final dataset due to non-response. The countries in the study are listed in Figure 2.

Figure 2: Country coverage

	#	Definition and source
Total number of independent nation-states	194	Membership of the United Nations (plus Taiwan)
Excluded categories		
Micro-states (pop less than 100,000)	16	Andorra, Dominica, Kiribati, Liechtenstein, Marshall Islands, Micronesia, Monaco, Nauru, Palau, San Marino, Seychelles, St. Lucia, St Vincent & Grenadines, St. Kitts and Nevis, Tonga, and Tuvalu.
Without de jure direct (popular) elections for the lower house of the national legislature and/or severe legal bans on parties	7	Brunei Darussalam, China, Oman, Qatar, UAE, Democratic People's Republic of Korea, and Saudi Arabia
Lack of response	8	Cape Verde, CAR, Honduras, Liberia, Niger, Senegal, South Sudan, Sri Lanka
Covered in the 2019 GPS dataset	163	84% of all nation-states

The dataset includes country-level metadata, using the latest year available (usually 2018), including measures of levels of liberal and electoral democracy, the Regimes of the World typology, the type of electoral system, and several institutional party characteristics from the [Varieties of Democracy](#) project (Version 9.0), measure of democracy from Polity IV and Freedom House, as well as national-level measures from the [World Bank Development Indicators](#) of economic development (per capita GDP), area, and population size. Regional codes are included along with the [Electoral Integrity Project](#) index of Perceptions of Electoral Integrity. It also includes the standard country codes from the [Correlates of War](#) (COW) project, to facilitate merging other national-level data.

EXPERTS

Participation in the survey was by personal invitation only. Experts were defined as scholars of parties and elections selected for each country drawing upon the global database established since 2012 by the [Electoral Integrity Project](#), checked and verified according to several criteria. Experts were defined as political scientists (or other social scientist in a related discipline) who had demonstrated knowledge of the electoral process and parties in a particular country, such as through publications, membership of a relevant research group, or university employment. This pool was supplemented in a few smaller countries, like island states in the Caribbean, by several additional scholarly party experts suggested by respondents using the 'snowball' technique.

Expert surveys have greatly expanded in use during the last decade (Cooley and Snyder 2015). Like other approaches, however, there are many sources of potential bias in the estimates they produce (Martinez i Coma and Van Ham 2015). This includes errors of judgment arising from assessments of complex multidimensional phenomenon, varied contexts for party competition under different regimes, and the depth of scholars' expertise on the topic.

One classic issue which has arisen in cross-national surveys ever since Almond and Verba's *Civic Culture* (1963) arises from the appropriate benchmarks which people may employ in making their assessments, for example whether current party positions are judged relative to their past positions, or compared with other parties within a country, or against other societies. The external validity of the measures can be examined most effectively by comparing the GPS estimates with similar independent studies, included in the dataset (see section IX: Robustness tests).

To test for internal validity, the GPS expert-level dataset allows users to analyze whether estimates of party positions were systematically influenced by the background and personal characteristics of participants, such as their nationality, ideological leanings, gender, or age (Curini 2009).

Two-thirds of respondents were born in their country of expertise, while three quarters are currently a citizen of that country. One quarter of the experts in the survey were female, reflecting gender disparities in the discipline. Respondents were asked to identify party positions in one country reflecting their primary area of published expertise, irrespective of their nationality or institutional location. The survey included both resident (domestic) and international experts (e.g. a scholar teaching at an American university who specializes in Egyptian or Liberian politics).

Figure 3: Experts' self-assessed difficult of completing the survey

Overall, when asked about the difficulty or ease of completing the survey on a ten-point scale, most reported positively that it was fairly easy (Mean 7.82). There was usually greater familiarity with larger parties, however, suggesting caution is advisable when analyzing estimates for the smaller parties.

The mean position of experts on the self-reported 10-point Left-Right ideological scale was 4.75, just below the mid-point.

Figure 4: Expert's left-right ideological position

RESPONSE RATE

Personalized survey invitations were distributed by email to experts, and responses collected online, through the Qualtrics platform. Fieldwork was conducted for one month, with an initial personal invitation to individual experts followed by two reminders, from 19 November to 20 December 2019.

Responses were received from 1,891 experts in total, representing an overall response rate of 23%. On average, each country included replies from around a dozen experts, but the numbers varied a great deal.

Like V-Dem, the GPS study aimed to include replies from a minimum of five experts per Country-Party. Sometimes we received fewer replies, however, especially in smaller developing societies in Africa and the Middle East; in states governed by autocratic regimes restricting freedom of expression; and in countries where fewer political scientists specialize in the study of parties and elections, and in ‘all of the above’. For example, on average around 19 experts responded to assess parties in liberal democracies. By contrast, around five expert estimates were gathered in many closed autocracies.

There are obviously tensions between the desire for the broadest global coverage and the need for considerable caution about the reliability of the estimates for societies with few responses, generating large confidence intervals. Users can take several steps with these particular cases.

Firstly, the number of experts per country is included as a variable in the dataset (*Experts*). Users may choose to adopt any minimum threshold. For example, the V-Dem project advises users to drop country cases in their dataset with three or fewer expert estimates. The variable (*Min_experts*) can be selected in GPS to filter out cases below 4.9 experts, removing 193 party estimates.

Users may also choose to filter or weight the estimates based on several indicators. This includes a ten-point scaled measure of expert *familiarity* with each political party in each country, which was included as the first item in the questionnaire, along with a 0-10 point scaled measure of the *difficulty* which experts reported at the end of the questionnaire after completing the survey.

Finally, analysts may choose to aggregate across country cases, for example to compare world regions or party families.

THE CONCEPT OF POPULIST RHETORIC AND ITS MEASUREMENT

An important debate concerns the conceptualization, operationalization, and measurement of populism. Building upon our previous work (Norris and Inglehart 2019, Norris 2019), populism is conceptualized in the survey at a minimum as a form of discourse or rhetoric making two core claims, namely that: (i) the only legitimate democratic authority flows directly from the people, and (ii) establishment elites are corrupt, out of touch, and self-serving, betraying the public trust and thwarting the popular will. As discussed elsewhere, we argue:

“In the political sphere, populist arguments challenge the legitimacy of intermediate power structures linking citizens and the state in liberal democracies, including that of elected representatives, mainstream political parties, elected assemblies and parliaments, as well as the courts, judges, and rule of law, and public sector bureaucrats and mainstream media, along with the broader range of policy technocrats, professional think-tanks, academic opinion-formers, and scientific consultants. The roots of populism can be traced back to concepts of direct democracy and the voice of the people in Jean-Jacques Rousseau’s The Social Contract (1762).

In this regard, populism is treated not a distinct type of leadership, or even a family of political parties, as is often assumed, but rather as a discourse about governance that can be adopted by actors across the entire ideological spectrum. We reject the notion that populism, in itself, makes other ideological claims about substantive or programmatic claims about what should be done; instead it is a rhetoric about the rightful location of governance authority in any society.

In Western democracies, the most common antithesis of populism is ‘Pluralism’, emphasizing the importance of tolerating multiculturalism and social diversity in society, governance through liberal democratic institutions, the role of checks and balances on executive powers, and respect for minority rights to counterbalance the majoritarian voice of the people.

In non-democratic countries, however, populism may also be contested by those advocating ‘elitism’ – claiming that power should rest in the hands of a single leader, a leadership elite, or a predominant party.” (Norris and Inglehart 2019).

Populism is therefore treated minimally in the GPS survey as a rhetoric making claims about the first order principles concerning the source of legitimate authority, emphasizing ‘power to the people’ and

presenting a critique of the establishment, rather than presenting a set of coherent ideological beliefs about substantive public policies on issues like the economy, immigration, or nationalism. The chameleonic rhetoric is adaptable, and it is colored by second order principles, including varied social and economic values and programmatic policy positions.

As a form of rhetorical appeal, the contrast between words and actions is a source of considerable misunderstanding and confusion. Parties and leaders who are progressive liberals seek to put populist discourse into action, redistributing power and authority to those previously excluded from decision-making processes, expanding democracy to the ‘left-behind’. More commonly, however, in practice populist discourse is deployed cynically as a façade to disguise the growing concentration of power in the hands of executive leaders, who claim to speak for the ‘people’, while dismantling pluralist checks and balances from counter-veiling institutions, including the courts, media, opposition parties, and the legislature, and simultaneously denigrating the rights of groups defined as outside the majority of ‘the people’. As such, an important distinction differentiates authoritarian-populists (where strongman leaders work to defend deeply conservative social values) versus libertarian-populists (advocating progressive social values and more inclusive forms of decision-making) (Norris and Inglehart 2019).

The core measure operationalizing the minimalist conceptualization of populist rhetoric, treated as antithetical to pluralist rhetoric, uses the following measure (V8_scale):

“Parties can also be classified by their current use of POPULIST OR PLURALIST rhetoric.

POPULIST language typically challenges the legitimacy of established political institutions and emphasizes that the will of the people should prevail.

By contrast, PLURALIST rhetoric rejects these ideas, believing that elected leaders should govern, constrained by minority rights, bargaining and compromise, as well as checks and balances on executive power.

Where would you place each party on the following scale?

0 Strongly favors pluralist rhetoric...10 Strongly favors populist rhetoric”

Given continuing debate in the research literature, however, rather than relying upon a single measure, the GPS survey includes several alternative indicators of populism, many used in other surveys, including V9 (the salience of populist rhetoric), V18 (Will of the people), V19 (People should decide), V20 (Politicians corrupt), and V21 (Strongman rule)). This allows users to select the particular variables and to construct composite measures closest to alternative conceptual frameworks. By combining measures, the dataset helps users to identify varieties of populists, along with their underlying values. Table 8 tests how far these items are correlated with independent estimates of populist parties.

MEASURES AND CONSTRUCTED TYPOLOGIES

There remains debate about the pros and cons of using categories or continuous measures. The survey employs 0 to 10-point scales throughout the questionnaire, providing continuous measures. This facilitates more fine-grained estimates than categories, such as how far parties favor spending or tax cuts, nationalism or multiculturalism, or liberal or conservative social values. Often, party positions are far from black and white, and scales allow experts to take account of subtle variations among parties and shifts over time.

Moreover, scales can always be converted subsequently into categories, for example to classify the most leftwing parties on the economy or the most egalitarian position towards women’s rights. The core measures in the survey, -- estimating the position of parties towards economic values (V4), social values (V6), and their use of populist rhetoric (V8) -- are offered to analysts as continuous 10-point scales, binary (0/1) categories, and as 1-4 ordinal categories.

Following the minimalist conceptualization in Norris and Inglehart (2019), populist rhetoric is measured in V8_scale as a matter of degree. The evidence suggests that the language can be adapted and used by multiple types of parties and leaders across the political spectrum. This marks a major point of departure

from previous studies treating ‘populists’ as a distinct type of party family, leadership style, or ideology, a practice conventional in the research literature.

Nevertheless, the Populist rhetoric scale can also be categorized (V8_Bin and V8_Ord) to analyze the characteristics of ‘moderate’ and ‘strongly’ populist parties, for users preferring categories and typologies. Robustness tests (see p.24) suggest that the category of ‘strongly populist parties’ based on this survey correlates closely with independent lists of ‘populist’ parties in Europe.

The dataset offers users several alternative party typologies constructed by categorizing variables.

Party Values (Type_Values)

The Values typology combines the types of *economic* values (V4_bin) and types of *social* values (V6-Bin). Economic and social values are often closely correlated in many West European societies, but elsewhere these can often be observed to diverge.

Populism (Type_Populism)

The Populism typology is generated by categorizing the populist rhetoric scale (V8) into four ordinal groups (V8_Ord). This assumes that the degree of populist and pluralist rhetoric can vary among parties and leaders, rather than being a fixed and distinct type of party family.

Populist Values (Type_Populist_Values)

The Populist Values typology combines the type of pluralist or populist rhetoric used by each party with their liberal or conservative social values.

Party-Voter comparisons

The dataset also includes measures of the location of party voters on functionally equivalent Left-Right and Liberal-Conservative scales, derived from the World Values Survey/European Values Survey Waves 1-7. Users can compare the GPS expert estimates of party positions with the location of their own party voters, and the position of the median voter in each country, as well as measures calculating the distance of parties on these scales from their own voters and the median voter in each country.

ACKNOWLEDGMENTS

The survey was directed by Pippa Norris at Harvard and administered by Laura Welty at the University of Sydney. It was funded by the Australian Research Council Laureate award as part of the Electoral Integrity Project. The EIP expert database has been compiled since 2012 by a team of research assistants in Sydney led by several survey managers including Max Grömping, Ferran Martinez I Coma, Alessandro Nai, Richard Frank, and Thomas Wynter.

The research design was developed in conjunction with colleagues at the [Chapel Hill Expert Survey](#) (CHES), Liesbet Hooghe, Gary Marks and Ryan Bakker, the team conducting a similar survey in Europe and Latin America. The study also benefited from several other scholars of parties and elections who were consulted about the early draft survey design and who generously offered invaluable suggestions, including Mark Franklin, David Farrell, Ioannis Andreadis, Tim Bale, and Susan Scarrow.

Social media comments about the estimates from data visualization scatterplots in specific countries also proved very helpful for scrutinizing the face-validity of the results in particular cases. Further comments and corrections remain welcome for subsequent releases of the dataset.

Finally, the research could not have been completed without the time and effort which all the experts invested in completing the survey – and everyone’s participation is greatly appreciated.

DATASETS

In February 2020, Version 1.0 of the dataset has been released in Excel, SPSS, Stata and .csv formats at the level of experts and parties, along with this Codebook and the Questionnaire. Files can be downloaded from: <https://dataverse.harvard.edu/dataverse/GlobalPartySurvey>. Any corrections will be amended in subsequent versions.

Pippa Norris -- Cambridge, MA

I: COUNTRY AND PARTY CODINGS		
ID_GPS	Unique numeric code for each party in the GPS dataset	1 to 1051
ISO	Standard country code (ISO 3166-1) https://www.iso.org/standard/63545.html	3-letter code E.g. AFG
COUNTRY	Country name	E.g. Afghanistan
PARTYNAME	Party name in English	E.g. Islamic Society
PARTYABB	Party name abbreviation	E.g. SPD
CPARTY	ISO+ full party name in English	E.g. AFG_Islamic Society
CPARTYABB	ISO+ party acronym	E.g. AFG_Jamiat
REGION	World Region (Politico-geographic) V-Dem9 (https://www.v-dem.net/en/)	1 E. Europe & C. Asia 2 Latin Am. & Carib 3 MENA 4 Sub-Saharan Africa 5 W. Europe, N. America, Australia/NZ 6 Asia-Pacific(not Aus/NZ)
EXPERTS	Number of expert responses per country	#
MIN_EXPERTS	Use to select country cases with a minimum number of at least 5 expert assessments	0. Less than 4.9 1. Five or more
CONSTRUCTED CATEGORICAL TYPES		
TYPE_VALUES	The Party Values typology combines two binary variables for each party, namely whether types of economic values are Left (pro-state) or Right (pro-market) (V4_bin) and whether types of social values are Liberal or Conservative (V6_Bin). See below for the variable questions (V4 and V6) and coding.	1. Left-Liberal 2. Left-Conservative 3. Right-Liberal 4. Right-Conservative
TYPE_POPULISM	The Party Populism typology categorizes whether parties favor the use of pluralism or populist rhetoric categorized into four groups (V8_Ord). See below for the variable question (V8) and coding.	1. Strongly Pluralist 2. Moderately Pluralist 3. Moderately Populist 4. Strongly Populist
TYPE_POPULIST_VALUES	The Populist Values typology combines the categories of rhetoric (V8_Bin) and the social values (B6_Bin) for each party. See below for the variable questions and coding.	1. Pluralist-Liberal 2. Pluralist-Conservative 3. Populist-Liberal 4. Populist-Conservative
TYPE_PARTYSIZE_VOTES	The size of electoral parties is gauged by categorizing their share of the vote in contests for the lower house of the national parliament/congress for Elec_Code	1. Fringe (0 thru 2.99%) 2. Minor (3.0 thru 9.99%) 3. Major (10.0 thru high)

TYPE_PARTYSIZE_SEATS	The size of parliamentary parties is gauged by categorizing their share of seats in the lower house of the national parliament/congress for Elec_Code	1. Fringe (0 thru 2.99%) 2. Minor (3.0 thru 9.99%) 3. Major (10% thru high)
II: GENERAL SURVEY QUESTIONS		
V1 FAMILIARITY	Q2.1 We start with a few general questions. First, how FAMILIAR are you with each of the following parties? Please indicate using the following scale.	0. Not very familiar 10. Very familiar 99. DK/MISSING
V2 PARTY UNITY	Q2.2 How far are the following parties generally UNITED OR DIVIDED in their current policy positions? Where would you place each party on the following scale?	0. Very divided 10. Very united 99. DK/NA/MISSING
V3 PROGRAM	Q2.3 In their party manifestos and election platforms, how far do the following parties present detailed plans and specific policies, or else offer more general slogans and vague promises? Where would you place each party on the following scale?	0. Very detailed plans and specific policies 10. Very general slogans and vague promises 99. DK/NA/MISSING
III: IDEOLOGICAL VALUES		
V4 ECONOMIC LEFT-RIGHT	Q3.1 Parties can be classified by their current stance on ECONOMIC ISSUES such as privatization, taxes, regulation, government spending, and the welfare state. Those on the economic LEFT want government to play an active role in the economy. Those on the economic RIGHT favor a reduced role for government. Where would you place each party on the following scale? Measured using three alternative variables: V4_Scale Continuous scale: from 0 to 10 V4_Bin. Binary categories: 0 (0 thru 4.9), 1 (5.0 thru 10) V4_Ord Ordinal; categories: 1 (0 thru 2.49)/ 2 (2.5 thru 4.9)/ 3 (5.0 thru 7.49)/ 4 (7.5 thru 10).	0. Extreme economic left 10. Extreme economic right 99. DK/NA/MISSING [+In CHES 2-17 and 2019 LRECON]
V5 L-R SALIENCY	Q3.2 And how IMPORTANT are economic issues for each of the following parties? Where would you place each party on the following scale?	0. No importance 10. Great importance 99. DK/NA/MISSING [+In CHES LRECON_SALIENCY]
V6 SOCIAL LIBERALISM-CONSERVATISM	Q3.3 Parties can also be classified by their current social values. Those with LIBERAL values favor expanded personal freedoms, for example, on abortion rights, same-sex marriage, and democratic participation. Those with CONSERVATIVE values reject these ideas in favor of order, tradition and stability, believing that government should be a firm moral authority on social and cultural issues. Where would you place each party on the following scale? Measured using three alternative variables: V6_Scale Continuous scale: from 0 to 10 V6_Bin. Binary categories: 0 (0 thru 4.9)/ 1 (5.0 thru 10) V6_Ord Ordinal Categories: 1 (0 thru 2.49)/ 2 (2.5 thru 4.9)/ 3 (5.0 thru 7.49)/ 4 (7.5 thru 10).	0. Very liberal 10. Very conservative 99. DK/NA/MISSING [+In CHES 2017 and 2019 GALTAN]

V7 SOCIAL VALUES SALIENCY	Q3.4 And how IMPORTANT are liberal/conservative social values for each of the following parties? Where would you place each party on the following scale?	0. No importance 10. Great importance 99. DK/NA/MISSING [+In CHES 2017 and 2019 GALTAN_SALIENCY]
V8 POPULIST RHETORIC	Q3.5 Parties can also be classified by their current use of POPULIST OR PLURALIST rhetoric. POPULIST language typically challenges the legitimacy of established political institutions and emphasizes that the will of the people should prevail. By contrast, PLURALIST rhetoric rejects these ideas, believing that elected leaders should govern, constrained by minority rights, bargaining and compromise, as well as checks and balances on executive power. Where would you place each party on the following scale? Measured using three alternative variables: V8_Scale Continuous scale: from 0 to 10 V8_Bin. Binary categories: 0 (0 thru 4.9)/ 1 (5.0 thru 10) V8_Ord Ordinal categories: 1 (0 thru 2.49)/ 2 (2.5 thru 4.9)/ 3 (5.0 thru 7.49)/ 4 (7.5 thru 10).	0. Strongly favors pluralist rhetoric 10. Strongly favors populist rhetoric 99. DK/NA/MISSING
V9 POPULIST SALIENCY	Q3.6 And how IMPORTANT is populist rhetoric currently for each of the following parties? Where would you place each party on the following scale?	0. No importance 10. Great importance 99.DK/NA/MISSING
IV: POLICY ISSUES		
V10 IMMIGRATION	Q4.1 Turning now to party positions on specific political issues, where do parties currently stand on IMMIGRATION? Where would you place each party on the following scale?	0. Strongly favors liberal immigration policies 10. Strongly favors restrictive immigration policies 99.DK/NA/MISSING [+In CHES 2017 and 2019 IMMIGRATE_POLICY]
V11 SPENDING V. TAX	Q4.2 Next, where do parties currently stand on PUBLIC SPENDING versus TAXATION? Where would you place each party on the following scale?	0 Strongly favors increased public spending 10 Strongly favors reduced taxation 99.DK/NA/MISSING
V12 ENVIRONMENT	Q4.3 Next, where do parties currently stand on the issue of ENVIRONMENTAL PROTECTION? Where would you place each party on the following scale?	0 Strongly favors environmental protection 10 Strongly opposes environmental protection 99.DK/NA/MISSING [+In CHES 2019]

V13 NATIONALISM	Q4.4 Next, where do parties currently stand on NATIONALISM VERSUS MULTILATERALISM. Those favoring MULTILATERALISM seek to respect international treaties, engage with United Nations agencies, and collaborate with regional organizations like the EU, OAS, AU, ASEAN, and OSCE. Those favoring NATIONALISM reject these ideas. Where would you place each party on the following scale?	0 Strongly favors nationalism 10 Strongly favors multilateralism 99.DK/NA/MISSING
V14 WOMEN'S RIGHTS	Q4.5 And where so parties currently stand on WOMEN'S RIGHTS? Where would you place each party on the following scale?	0 Strongly favors women's rights 10 Strongly opposes women's rights 99.DK/NA/MISSING
V15 ETHNIC MINORITY RIGHTS	Q4.6 Next, where do parties currently stand on ETHNIC MINORITY RIGHTS? Where would you place each party on the following scale?	0 Strongly favors ethnic minority rights 10 Strongly opposes ethnic minority rights 99.DK/NA/MISSING [+In CHES 2019]
V16 LIBERAL DEMOCRACY	Q4.7 Next, where do parties currently stand on LIBERAL DEMOCRATIC principles, norms and practices? Where would you place each party on the following scale?	0: Strongly respects liberal democratic, principles, norms and practices 10: Strongly undermines liberal democratic principles, norms and practices 99.DK/NA/MISSING
V17 CLIENTALISM	Q4.8 Next, on clientelism, where do parties currently stand on DISTRIBUTING PUBLIC GOODS, like material benefits, subsidies, construction projects, and jobs. Do they favor giving universally to all citizens or else primarily to their own supporters? Where would you place each party on the following scale?	0.Strongly favors universal distribution to all citizens 10.Strongly favors distribution mainly to their own supporters 99.DK/NA/MISSING
V: POPULIST RHETORIC		
V18 WILL OF THE PEOPLE	Q5.1 Next we seek to understand the type of rhetoric commonly used by each party, such as in their leadership speeches, rallies, press releases, party platforms, and campaign communications. Where would you place each party on the following scale?	0. Strongly emphasizes that politicians should follow the will of the people 10. Strongly emphasizes that politicians should lead public opinion 99.DK/NA/MISSING

V19 PEOPLE SHOULD DECIDE	Q5.2 How would you characterize the rhetoric commonly used by various parties on whether the people or leaders should decide important issues? Where would you place each party on the following scale?	0. Strongly emphasizes that ordinary people should decide important issues 10. Strongly emphasizes that leaders should decide important issues 99.DK/NA/MISSING [+In CHES 2017 and 2019 PEOPLE_VS_ELITE]
V20 POLITICIANS CORRUPT	Q5.3 How would you characterize the rhetoric commonly used by various parties on whether most politicians are honest or corrupt? Where would you place each party on the following scale?	0 Strongly emphasizes that most politicians are honest and trustworthy 10. Strongly emphasizes that most politicians are dishonest and corrupt 99.DK/NA/MISSING
V21 STRONGMAN RULE	Q5.4 How would you characterize the rhetoric commonly used by various parties towards checks and balances on executive power? Where would you place each party on the following scale?	0 Strongly favours checks and balances on executive power 10. Strongly opposes checks and balances on executive power 99.DK/NA/MISSING
VI: PERSONAL BACKGROUND OF THE EXPERTS		
YOB	Q6.1 Finally, we would like to ask you a few questions about your personal background. What is your year of birth?	Year (1942 to 1992) 9999.DK/NA/MISSING
GENDER	Q6.2 What is your gender?	0 Women/1 Men Proportion of male respondents 9 Other or prefer not to answer 99.DK/NA/MISSING
BORN	Q6.3 Were you born in (the name of the country of expertise)	0 No 1 Yes 99.DK/NA/MISSING
CITIZEN	Q6.4 Are you currently a citizen of (the name of the country of expertise)	0 No 1 Yes 99.DK/NA/MISSING
PARTYSUPPORT	Q6.5 If you were able to participate in the last national election in (the name of the country of expertise), which political party, if any, did you generally support?	Party name selected from the list 99.DK/NA/MISSING
IDEOLOGY	Q6.6 Below is a 10-point scale on which your general political views can be arranged from LEFT to RIGHT. Where would you place your views on this scale?	0 Very left 10 Very right 99 DK/NA/MISSING

DIFFICULTY	Q7.2 Overall, how easy or difficult did you find the questions? On a scale of 1 to 10 where 1 means the questionnaire was 'very difficult to understand' and 10 means the questionnaire was 'very easy to understand'.	0 Very difficult to understand 10 Very easy to understand 99.DK/NA/MISSING

v2xps_party	Party institutionalization index: <i>'To what extent are political parties institutionalized?'</i> (V-Dem 9.0)	0-1

IX: ROBUSTNESS TESTS

Does the data provide reliable and valid measures of party ideological values, issue positions and populist rhetoric? Alternative approaches to identifying party positions have been employed in the research literature, such as expert and mass surveys, content analysis of party documents and leadership speeches, and analysis of legislative roll call votes, each with potential strengths and weaknesses (Laver 2001; Norris 2020).

Comparison across datasets provide health checks of the reliability and robustness of the estimates in this survey. The CHES estimates have been compared, for example, with data from party manifestos, surveys of MPs, and other expert studies (Bakker et al. 2012; Hooghe et al., 2010; Marks et al., 2007; Netjes and Binnema, 2007; Steenbergen and Marks, 2007; Whitefield et al., 2007).

Nevertheless, studies can be expected to vary in their estimates for various reasons, not least the use different question wordings, party lists, and methods. Parties are also far from static in their positions and ideological values, whether responding to leadership turnover, the shifting saliency of issues on the policy agenda, changes in their electoral fortunes, or new patterns of party competition. Where studies conducted within a few years of each other can be compared, however, this helps to assess the external validity and robustness of several key GPS estimates.

ELITE SURVEYS:

Common methods in party research involves elite-level surveys such as asking independent experts to monitor perceptions of party issue positions. Other elite-level studies have monitored the attitudes and values of party members and supporters (van Haute and Gauja 2015), party elites like the [Comparative Candidate Survey](#), and legislators in national and European parliaments (Norris and Lovenduski 1995; Katz and Wessels 1999; Schmitt and Thomassen 1999; Bailer 2014).

International expert surveys have become one of the most common tools in the social and policy sciences, used to measure and rank everything from perceptions of corruption to levels of democracy and human rights, press freedom, good governance, rule of law, and electoral integrity (Cooley and Snyder 2015).

CHES-2017

Accordingly, the results in this study can be compared with the Chapel Hill Expert Survey, established to compare the issue position of European parties every four years since 1995. For comparison with the most recently-available estimates, the [CHES-2017](#) dataset contains seven identical (or functionally equivalent) items designed to measure ideological values and issue positions. Comparing the estimates in both studies generates remarkably strong and significant correlations in 84 European parties contained in both studies (See Figures 5 and 6). Despite differences in the timing, selection of experts, and fieldwork methods, in fact both studies produce very similar estimates of party positions.

Figure 5: Comparing GPS and CHES estimates

	R	Sig
<i>V4 Values: The party is left (0) or right (10) on economic issues</i>	0.848	0.000
<i>V5 Saliency: The importance of economic issues</i>	0.822	0.000
<i>V6 Values: The party is liberal (0) or conservative (10) in their social values</i>	0.939	0.000
<i>V7: Saliency: The importance of social values</i>	0.788	0.000
<i>V10 Issues: Party favors liberal (0) or restrictive (10) immigration policies</i>	0.936	0.000
<i>V15 Issues: Party favors (0) or opposes (10) ethnic minority rights</i>	0.885	0.000
<i>V19 Rhetoric: The people should decide important issues (0) or leaders should decide (10)</i>	0.598	0.000

Figure 6: Correlations between the GPS-2019 and CHES-2017 estimates, 84 parties

Note: Q: “Parties can also be classified by their current social values. Those with LIBERAL values favor expanded personal freedoms, for example, on abortion rights, same-sex marriage, and democratic participation. Those with CONSERVATIVE values reject these ideas in favor of order, tradition and stability, believing that government should be a firm moral authority on social and cultural issues. Where would you place each party on the following scale?”

Sources: www.GlobalPartySurvey.org CHES-2017

ParlGov

Comparisons can also be drawn for 192 parties in this study with estimates in the [Parliaments and Government](#) (ParlGov) database (Döring and Manow 2019). The position of political parties was estimated in ParlGov by combining data from previous expert surveys conducted by Castles/Mair 1983, Huber/Inglehart 1995, Benoit/Laver 2006, and CHES 2010.

The GPS estimates of the Left-Right economic position of parties was strongly correlated with the ParlGov left-right estimates ($R=0.739^{***}$). Similarly, ParlGov’s 10-point value scale for the position of parties on the ‘libertarian/authoritarian’ dimension was strongly related to the GPS’s estimate on this dimension ($R=0.828^{***}$). Given the differences in time periods and measures used, this is a remarkably strong correlation.

Comparative Manifesto Project

Another common approach has sought to identify where parties stand on policy issues through extracting data from hand and automatic textual coding of party platforms, exemplified by the long-standing [Comparative Manifesto Project](#) (Budge 2000; Budge et al 2001; Klingemann et al 2006; Benoit and Laver 2007; Krouwel and Elrinkhof 2014).

This approach is most suitable for comparing programmatic parties, such as the manifestos published in established parliamentary democracies in Western Europe. But collective party platforms and manifesto documents may not function as important guides to party policy or values in other cases,

such as in countries with personalistic presidential executives, clientelist party campaigns, or where new parties are poorly institutionalized.

The GPS measure of Left-Right economic values can also be compared with the Comparative Manifestoes Project Left-Right ideological party positions, based on textual analysis of the salience of issues in party platforms. The CMP data was averaged for parliamentary election held from 2014-19. The results showed a moderately strong correlation between GPS and these CMP estimates ($R=.569^{**}$, $N. 157$), still statistically significant, but a weaker fit than with the CHES and PG expert surveys.

Popu-List

The position of populist parties has been subject to considerable debate in recent years, not least the European tradition of classifying these using legacy concepts as part of the ‘extreme right’, ‘far right’, or ‘radical right’ party family. The [Popu-List](#) project (Rooduijn et al 2019) provides a test of the face-validity of the GPS estimates. The study consulted thirty scholars of populism to classify the position of 127 European parties with at least 2% of the vote in a national parliamentary election since 1998. Parties were categorized using simple (0/1) binary codes into the four dimensions, namely as populist, far right, far left, and Eurosceptic (Rooduijn et al 2019). Where comparisons could be drawn, Figure 7 shows the Popu-list classification of populist parties (highlighted in red) is strongly correlated with the GPS scaled estimates of populism, using the core V8 pluralism-populism scale.

Fig 7. Comparing the GPS pluralism-populism scale and the Popu-List classification of populist parties

Notes: V8 Populism scale: “We seek to understand the type of rhetoric commonly used by each party, such as in their leadership speeches, rallies, press releases, party platforms, and campaign communications. Vertical Axis: Parties can be classified by their current use of POPULIST OR PLURALIST rhetoric. POPULIST language typically challenges the legitimacy of established political institutions and emphasizes that the will of the people should prevail. By contrast, PLURALIST rhetoric rejects these ideas, believing that elected leaders should govern, constrained by minority rights, bargaining and compromise, as well as checks and balances on executive power. Where would you place each party on the following 0-10 scales? And how important is populist rhetoric for each of these parties?” Parties in RED are identified as populist by the Popu-List project. **Source:** <https://popu-list.org/> www.GlobalPartySurvey.org

Moreover, to examine this further, the Popu-List classification of populist parties in Europe can be compared against all the measures in the GPS survey. As shown in Figure 8, the V8 scale measure of pluralism-populism proved to be the single measure most strongly correlated with parties classified as populist by the Popu-List project. Several other items in the GPS survey were also strongly correlated with the Popu-List classification, such as whether party rhetoric emphasized the ‘will of the people’ and political corruption, as well as issues such as opposition to ethnic minority rights and immigration, as shown in Figure 8. By contrast, economic values were unrelated to the Popu-List classification of populist parties.

Figure 8: Correlations of GPS items with the Popu-List classification of populist parties.

		R	Sig
<i>V8_scale</i>	Party favors pluralist or populist rhetoric	0.542	***
<i>V13</i>	Party favors multilateralism or nationalism	0.509	***
<i>V18</i>	Party rhetoric strongly emphasizes that politicians should follow the will of the people	0.496	***
<i>V16</i>	Party respects or undermines liberal democratic principles	0.436	***
<i>V20</i>	Party rhetoric emphasizes that most politicians are dishonest and corrupt	0.457	***
<i>V15</i>	Party opposes ethnic minority rights	0.425	***
<i>V19</i>	Party rhetoric emphasizes that the people should decide important issues	0.380	***
<i>V21</i>	Party rhetoric opposes checks and balances on executive power	0.369	***
<i>V10</i>	Party favors liberal or restrictive immigration policies	0.366	***
<i>V14</i>	Party opposes women's rights	0.333	***
<i>V12</i>	Party opposes environmental protection	0.330	***
<i>V17</i>	Party favors distribution of public goods mainly to their own supporters (clientelism)	0.296	***
<i>V3</i>	Party presents detailed plans or more general slogans and vague promises	0.258	***
<i>V6</i>	Party is conservative in their social values	0.256	***
<i>V11</i>	Party favors increased public spending or reduced taxation	0.052	N/s
<i>V4</i>	Party is leftwing or rightwing in their economic values	0.004	N/s

The World Values Survey/European Values Survey, 1981-2020.

Finally, comparisons can also be drawn between the GPS estimates on major ideological values and the position of voters for each party, using the World Value Survey/European Values Survey ([World Values Survey](http://www.worldvaluessurvey.org)). This dataset was pooled over all seven waves, to maximize the number of respondents who reported voting for smaller parties, although this generates less up-to-date estimates than using only the most recent wave.

The *Left-Right scale* in the WVS/EVS has asked respondents to identify their ideological position based on the following question: “In political matters, people talk of ‘the left’ and ‘the right.’ How would you place your views on this scale, generally speaking.” Coded Left (1) to Right (10).

The *Liberal-Conservative social values* scale was constructed from adding responses to three items then converting to a 10-point scale: “Please tell me for each of the following actions whether you think it can always be justified, never be justified, or something in between, using this card....Abortion, Homosexuality, Divorce.” This was coded from ‘Always justifiable’ (1) to ‘Never justifiable’ (10) for each item. This is similar but obviously not identical to the CHES/GPS measure of Liberal-Conservative social values (known as the Gal/tan scale).

Strong and significant correlation ($R=0.477^{***}$ N. 401 parties) link the GPS expert estimates of party locations on the Left-Right scale (horizontal axis below) with where party voters placed themselves on the same scale in the WVS/EVS (vertical axis below). Moreover, the correlation strengthened ($R=0.632^{***}$) when comparing the subset of 157 parties within the liberal democracies, with more stable and institutionalized party systems.

Figure 9: Comparing expert estimates of party positions with each party's own voters on the Left-Right scale, OECD only

Note: Vertical axis=WVS_LR_PARTYVOTER. Horizontal Axis=V4_scale. Colors by Type_Values
Crimson =Left-Liberal/ UMBER=Left-Conservative/ Azure=Right-Liberal/ Royal Blue=Right-Conservative. **Sources:** GPS 2019 and WVS/EVS 1-7.

Similar patterns can be observed when comparing voter's social values with the position of parties on the liberal-conservative social values scale ($R=0.483^{***}$ N. 416 parties).

Overall therefore, where comparisons could be drawn with a wide range of independent evidence, the robustness tests serve as a health check confirming the external validity of the GPS estimates. The inclusion of several independent estimates in the GPS dataset allows analysts to make their own further comparisons, for example by global region or party type. At the same time, however, as discussed earlier, there remains a health warning about the size of the margin of error of the GPS estimates in parties and countries with few respondents. Replication of the survey in future years would help to provide further cross-checks on the robustness of the estimates.
